

CONQUER YOUR RISK ANALYSIS WITH AVRA

Integrated

Informative

Timely

Supportive

SIMPLIFY THE PLANNING PROCESS FOR YOUR VESSELS

AVRA or Automated Voyage Risk Assessment is a web-based service that provides an assessment of the current threats to merchant ships at sea and in ports across the globe. It generates specific threat assessments for an individual vessel making a voyage anywhere in the world. It also provides a Port Only facility that owners and operators can use to investigate the risk to a particular ship at a specific port. Our service offers owners and operators a tool to enhance crew, ship, and cargo safety and security through a completely automated web-based service.

ACCURATE AND TIMELY

AVRA will give accurate identification of specific threats allowing time for preventative procedures and countermeasures to be incorporated and implemented into the Ship Security Plan and reduce risk.

STAY INFORMED

AVRA provides a new comprehensive threat analysis process that will inform security risks for global ports and sea areas at the click of a button and simplify the task of the Company Security Officer.

SAVE MONEY BY REDUCING RISK

Reduce losses and cut costs by guarding against the financial impact of maritime crime. AVRA's algorithm assesses the impact of a whole range of protective security measures, reducing the security risks to a voyage.

CORPORATE IDENTITY

HudsonTrident is committed to protecting your assets to keep your workers, vessels, facilities, and company secure. Our team is standing by to assist you with all your security needs.
